# Assignment 04, Question 5&6

Jeff Nguyen

April 1, 2021

University of Southern California Marshall School of Business FBE 543 Forecasting and Risk Analysis

Student Name: Ngoc Son (Jeff) Nguyen

# Question 5

a. Do a three-period ahead forecasting using the given initial values and statistics. Write 95% confidence interval for each forecast.

**a**)

```
alpha_0 <- 6
alpha_1 <- .7
alpha_2 <- .12
y_0 <- 5
y_1 <- 6
sigmaSq <- 1.21
f <- function(y_tMinus1, y_tMinus2) {alpha_0 + alpha_1*y_tMinus1 + alpha_2*y_tMinus2}
y_2 <- f(y_1, y_0)
y_3 <- f(y_2, y_1)
y_4 <- f(y_3, y_2)</pre>
```

$$Y_t = 6 + 0.7Y_{t-1} + 0.12Y_{t-2} + \epsilon_t$$
 given:  
 $y_0 = 5$  (1)  
 $y_1 = 6$   
 $\sigma^2 = 1.21$ 

Forecast	Forecasted	95% Confidence Interval	95% Confidence Interval
Variable	Value	Equation	
	10.8	$Y_{t+1}^F \pm 1.96\sqrt{\sigma^2}$	[8.644, 12.956]

Forecast Variable	Forecasted Value	95% Confidence Interval Equation	95% Confidence Interval
$ \overline{Y_3^F} = 6 + 0.7Y_2 + + 0.$	14.28	$Y_{t+2}^F \pm 1.96\sqrt{\sigma^2(1+\alpha_1^2)}$	[11.6482666,13.4317334]
$ 0.12Y_1  Y_4^F =  6 + 0.7Y_3 +  0.12Y_2 $	17.292	$Y_{t+3}^F \pm 1.96\sqrt{\sigma^2(1+\alpha_1^2+\alpha_2^2+\alpha_1^4+2\alpha_1^2)}$	$\frac{[14.3499486,20.2340514]}{\alpha_2)}$

#### b)

```
alpha_0 <- 2.5
alpha_1 <- .3
alpha_2 <- -.28
y_0 <- 1
y_1 <- 2
sigmaSq <- 6.25
f <- function(y_tMinus1, y_tMinus2) {alpha_0 + alpha_1*y_tMinus1 + alpha_2*y_tMinus2}
y_2 <- f(y_1, y_0)
y_3 <- f(y_2, y_1)
y_4 <- f(y_3, y_2)</pre>
```

$$Y_t = 2.5 + 0.3Y_{t-1} + -0.28Y_{t-2} + \epsilon_t$$
 given: 
$$y_0 = 1$$
 
$$y_1 = 2$$
 
$$\sigma^2 = 6.25$$
 (2)

Forecast Variable	Forecasted Value	95% Confidence Interval Equation	95% Confidence Interval
	2.82	$Y_{t+1}^F \pm 1.96\sqrt{\sigma^2}$	[-2.08, 7.72]
$Y_3^F = 2.5 + 0.3Y_2 + -0.28Y_1$	2.786	$Y_{t+2}^F \pm 1.96\sqrt{\sigma^2(1+\alpha_1^2)}$	[-2.3297502,7.9357502]
$Y_4^F = 2.5 + 0.3Y_3 + -0.28Y_2$	2.5462	$Y_{t+3}^F \pm 1.96\sqrt{\sigma^2(1+\alpha_1^2+\alpha_2^2+\alpha_1^4+2\alpha_1^2)}$	$\frac{[-2.6535751, 7.7459751]}{\alpha_2)}$

#### **c**)

```
alpha_0 <- 1.2

# Question 6

# 1. What is auto-correlation function (ACF)?

In time series analysis, the ACF is a function of correlation relationship between a time variable and its own lagged value. The function identifies the order of AR (Autoregressive), I (Integration), and MA (Moving Average) of the necessary ARIMA model.

### 2. What is partial auto-correlation function (PACF)?

In time series analysis, the partial autocorrelation function (PACF) gives the partial correlation of a stationary time series with its own lagged values, regressed the values of the time series at all shorter lags. It contrasts with the autocorrelation function, which does not control for other lags.

This function plays an important role in data analysis aimed at identifying the extent of the lag in an autoregressive model. The use of this function was introduced as part of the Box–Jenkins approach to time series modelling, whereby plotting the partial autocorrelative functions one could determine the appropriate lags p in an AR(p) model or in an extended ARIMA(p,d,q) model.

# 3. Given the following correlograms write the order of the ARIMA for each model (a to d).

- a. AR(1)
- **b.** ARMA(1,1)
- **c.** MA(1)
- **d.** MA(1)
